1. Downhole thickness; true width varies depending on drill hole dip; most drill holes are aimed at intersecting the vein structures close to perpendicular therefore true widths are close to downhole widths (approximately 60-70% conversion ratio)
2. Gold equivalent =  $g \text{ Au/t} + (g \text{ Ag/t} \div 77.70)$
3. Intervals reported are uncapped

500 m
